PROBLEM

Agents can read Mezo but cannot pay for data

An agent has no BTC for gas and cannot click through wallet screens.

So it cannot buy data on its own.

10 entries on the Akindo Wave 1 page, 2026-10-18

0 offer MCP tools or an x402 buyer, per their READMEs and descriptions

SOLUTION

One toolkit, three parts

1

Lens contract

Read-only. One call replaces many reads.

2

MCP server

Five tools. The four read tools are free.

3

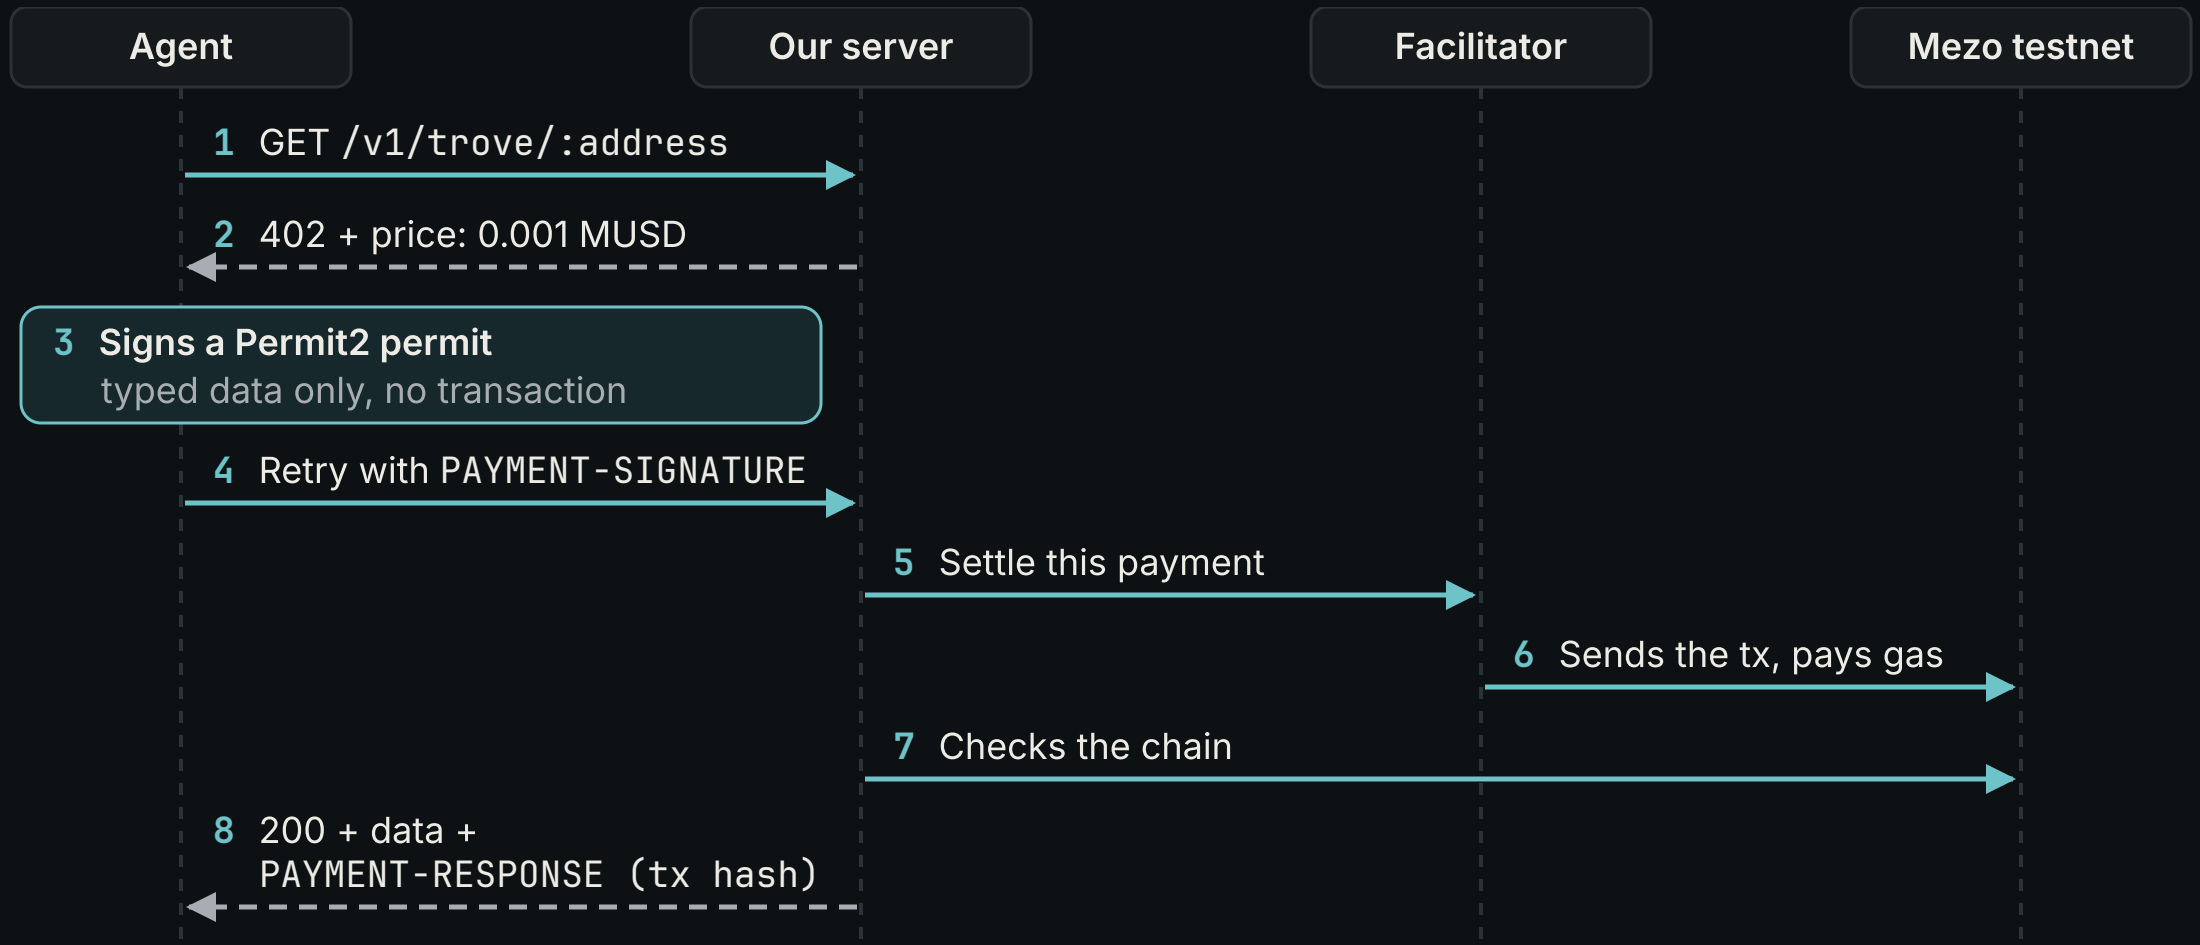

Pay-per-call endpoint

HTTP with x402. 0.001 MUSD per call.

An agent reads for free and pays 0.001 MUSD per call, with no BTC for gas.

HOW IT WORKS

The agent signs, the facilitator pays gas

THE MUSD INTEGRATION

x402 on Mezo testnet, settled in MUSD

Standard	x402 v2, scheme `exact`
Network	`eip155:31611` (Mezo testnet)
Asset	MUSD `0x118917a40FAF1CD7a13dB0Ef56C86De7973Ac503`
Amount	0.001 MUSD per call
Permit2 proxy	`0x402085c248EeA27D92E8b30b2C58ed07f9E20001`
Gas	EIP-2612 gas-sponsoring extension: the facilitator pays the BTC
Facilitator	`facilitator.vativ.io`, a third party

> MUSD has no EIP-3009, so only Permit2 payments land.

MCP TOOLS AND THE SPEND CAP

Five tools, one spend cap

FREE DIRECT LENS READS

`trove_health`

`redemption_risk`

`pool_quote`

`ve_locks`

PAYS X402 SELLERS

`pay_and_fetch`

LIMITS FROM THE OPERATOR ENVIRONMENT

`MEZO_MAX_PER_CALL_MUSD`
default 0.01

`MEZO_MAX_PER_SESSION_MUSD`
default 0.1

`MEZO_PAY_ALLOWED_HOSTS`
default: our own endpoint only

Never from a tool argument

Check and reserve before signing

Amounts in bigint base units

THE LENS CONTRACT

MezoLens: one call instead of many

`0xBDfD1C0B544319E25b4b99ee1f355e55230f6130` read-only, Mezo testnet, source verified on the explorer

`troveHealth`	collateral ratio, debt, liquidation price
`systemSnapshot`	system ratio, recovery mode, where a redemption starts
`redemptionQueue`	paged walk, at most 300 nodes per eth_call, continued with a cursor
`poolQuote`	swap quote and price impact
`veLocks`	veBTC and veMEZO locks of a wallet, with voting power

> Testnet run, 2026-10-18: redemptionQueue walked **31** of 258 list nodes.

SAFETY

What the payment review fixed

BUYER SIDE

B3	No unlimited approval
B2	Validity at most 300 s
B1	Allow list defaults to our own endpoint
B4	No double pay: unconfirmed nonce and deadline remembered per URL

SELLER SIDE

R1	One tx vouches once
R2	Data only when the chain shows the payment
R3	Recovery by block and index, not by hash

STATUS

Tested on Mezo testnet

173 tests passed in 10 files

EARLIER RUNS, CHECKS PASSED

23 smoke	**29** mcp:session
28 worker:smoke	**51** console QA

0.034 MUSD paid in development

Not deployed yet. A wallet with no BTC at all was not tried.

TESTNET RUNS, 2026-10-18

x402 buyer, one paid call - block 16232870	`0x74fed710...dc9df1`
MCP pay_and_fetch, one paid call - block 16232873	`0x99a3c4a3...d678cc`

TESTNET TRANSACTIONS IN THE README

MezoLens deployed	`0x4c673819...821dd1`
First paid call, via the facilitator	`0x1499eccd...6f7b9d`
pay_and_fetch, after the review	`0xb15e02af...cd9119`
pay_and_fetch, to the Worker	`0x779df435...89d4d8`

WAVE 2: 2026-11-02 TO 2026-11-15

Next three milestones

1

One settlement ledger for all Worker instances, so a tx vouches once everywhere. A run measured against Cloudflare's real limits (CPU time, subrequests).

2

Spend limits that survive a restart (daily cap). An installable MCP server package: one config line to add it.

3

A ve gauge vote helper. More pool quotes in the lens, as free reads.

Plans, not promises. Testnet only.
