Agents can read Mezo but cannot pay or act

An agent has no BTC for gas and cannot click through wallet screens.

So it cannot buy data, or open a trove, on its own.

0.001 MUSD per paid call

0 BTC spent by the agent in the paid runs

SOLUTION

One toolkit, three parts

1

Lens contract

Read-only. One call replaces many reads.

2

MCP server

28 tools: 13 free reads, 14 guarded writes (off by default) and pay_and_fetch.

3

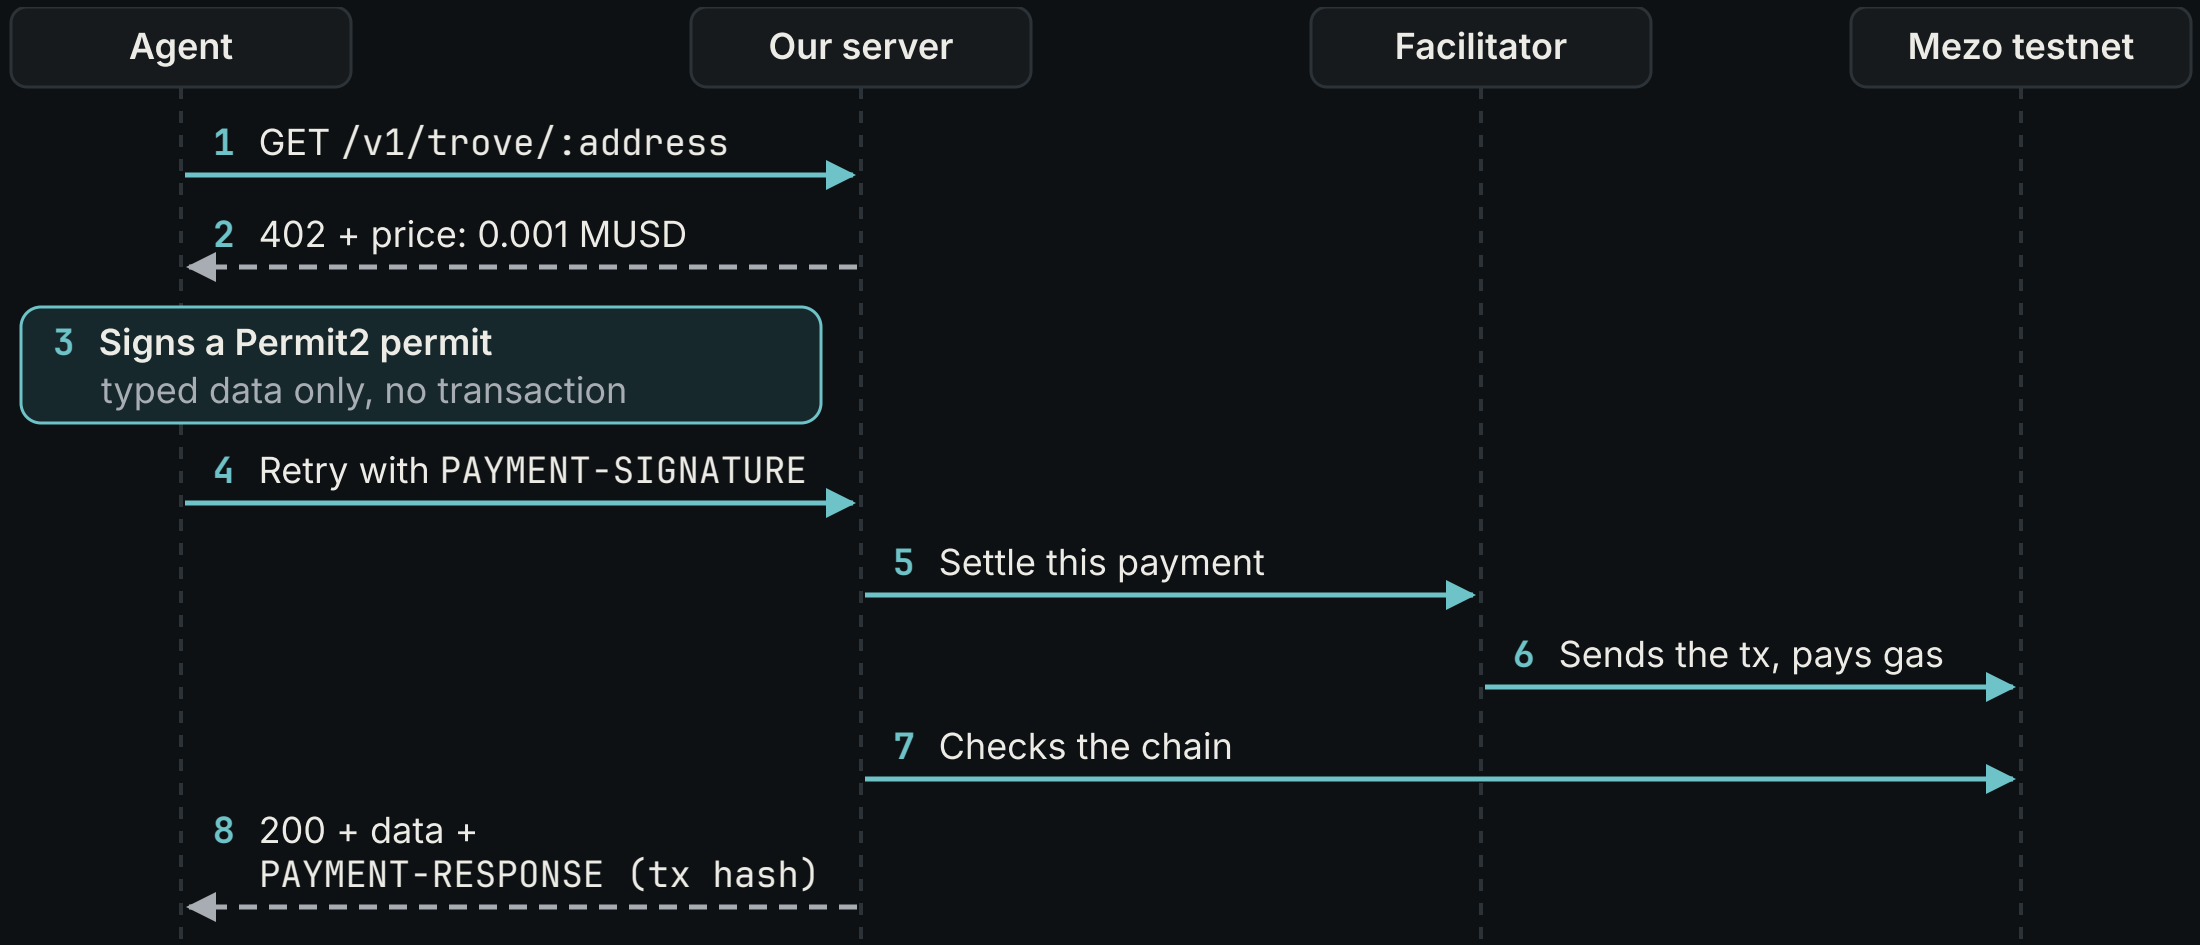

Pay-per-call endpoint

HTTP with x402. 0.001 MUSD per call.

An agent reads for free, pays 0.001 MUSD per call with no BTC for gas and, if its operator allows, acts on testnet.

HOW IT WORKS

The agent signs, the facilitator pays gas

THE MUSD INTEGRATION

x402 on Mezo testnet, settled in MUSD

Standard	x402 v2, scheme `exact`
Network	`eip155:31611` (Mezo testnet)
Asset	MUSD `0x118917a40FAF1CD7a13dB0Ef56C86De7973Ac503`
Amount	0.001 MUSD per call
Permit2 proxy	`0x402085c248EeA27D92E8b30b2C58ed07f9E20001`
Gas	EIP-2612 gas-sponsoring extension: the facilitator pays the BTC
Facilitator	`facilitator.vativ.io`, a third party

> MUSD has no EIP-3009, so only Permit2 payments land.

MCP TOOLS AND THE LIMITS

28 tools; writes are off by default

13 FREE READS, FOR EXAMPLE

`trove_health` `ve_status` `sp_status`

14 GUARDED WRITES, FOR EXAMPLE

`trove_open` `sp_deposit` `ve_vote`

PAYS X402 SELLERS

`pay_and_fetch`

PAYMENT LIMITS FROM THE OPERATOR ENVIRONMENT

`MEZO_MAX_PER_CALL_MUSD`
default 0.01

`MEZO_MAX_PER_SESSION_MUSD`
default 0.1

`MEZO_PAY_ALLOWED_HOSTS`
default: local endpoint and live Worker

Writes need MEZO_WRITE_ENABLE=testnet

Allow-list; caps read from the signed bytes

A kill file stops every write

THE LENS CONTRACT

MezoLens: one call instead of many

`0x659203438789Ce052a9148Ef5A807508ab5eE40c` read-only, Mezo testnet, source verified on the explorer

`troveHealth`	collateral ratio, debt, liquidation price
`systemSnapshot`	system ratio, recovery mode, where a redemption starts
`redemptionQueue`	paged walk, at most 300 nodes per eth_call, continued with a cursor
`poolQuote`	swap quote and price impact
`veLocks`	veBTC and veMEZO locks of a wallet, with voting power

> Redeployed on the LIVE vote-escrow system on 2026-10-31 (block 16482080). The Wave 1 lens is superseded.

SAFETY

A review of the code found 3 issues; all fixed

SECURITY REVIEW, WAVE 2

R1	High: daily caps held in one process only. Now one writer at a time.
R2	Medium: plain http accepted for payments. Now https only, except on this machine.
R3	Medium: key file mode never checked. Now a warning.

HOW A WRITE IS HELD

1	Simulated first; a revert sends nothing
2	Contract and function on an allow-list
3	Caps read from the signed bytes
4	A kill file stops every write

STATUS

Tested on Mezo testnet

474 tests in 20 files

OTHER CHECKS PASSED

23 smoke	**29** mcp:session
28 worker:smoke	**51** console QA

50 payments, 0.05 MUSD, all from our wallet

Counted on 2026-11-11. Testnet only; nothing on mainnet.

TESTNET TRANSACTIONS, 2026-10-31 AND 2026-11-05

`trove_open` - block 16484113	`0xd908acf9...995cbc`
`sp_deposit` - block 16485134	`0xce607af0...904b5a`
`trove_liquidate` - block 16485146	`0x2eba8e07...46dace`
`ve_lock` - block 16482808	`0xfed42ec9...231c2c`
`ve_vote` - block 16482823	`0xaca4dfa5...d4e897`
`ve_claim_rewards (fees)` - block 16578183	`0x904762d6...6dc32e`
`trove_repay, with the claim` - block 16578195	`0x57c61107...01fc85`

WHO PAYS

Who pays, and who gets paid

PAYS: THE AGENT OPERATOR

Gives an AI agent a Mezo wallet and sets its spend limits, which the agent cannot change. 0.001 MUSD per paid call, no BTC for gas.

GETS PAID: THE DATA SELLER

Sells Mezo reads over HTTP. Deploys the Worker with its own payee address. Each paid call is one MUSD transfer to it; this toolkit takes no cut.

> Not there yet: outside users, outside payers (0), revenue, anything beyond testnet. Paid use so far: 50 payments, 0.05 MUSD, all from our own wallet, up to 2026-11-11.

WAVE 2: 2026-11-02 TO 2026-11-15

The four Wave 1 asks, and where they stand

1

Act on Mezo

14 write tools. 14 testnet transactions, one a contract deploy. Claimed fees repaid a trove.

2

Outside payers

0. Fifty payments, 0.05 MUSD, all from our own wallet.

3

Business case

Reads stay free. One claim cycle: 13.339 MUSD for 163045354 wei of gas.

4

Install

One config line from the v0.2.0 release. Not on the npm registry.

Still open: an outside payer, one settlement ledger for all Worker instances, a run on Cloudflare's real limits. Details: docs/WAVE2.md. Testnet only.
